In formal language theory, a grammar (when the context is not given, often called a formal grammar for clarity) is a set of production rules for strings in a formal language. The rules describe how to form strings from the language's alphabet that are valid according to the language's syntax. A grammar does not describe the meaning of the strings or what can be done with them in whatever context ...

In automata theory, a finite state machine is called a deterministic finite automaton (DFA), if . each of its transitions is uniquely determined by its source state and input symbol, and; reading an input symbol is required for each state transition. A nondeterministic finite automaton (NFA), or nondeterministic finite state machine, does not need to obey these restrictions.
